# HALLS OF RESIDENCE

- Mahanadi Hall of Residence
- Subarnarekha Hall of Residence
- Brahmaputra Hall of Residence
- Ganga Hall of Residence
- Rushikulya Hall of Residence
- Sangam Hall of Residence

According to this year's allocation, freshers are allotted to Rushikulya (for boys) and Sangam (for girls). All of the halls except Sangam are single occupancy, hence no issues of a messy roommate 😊.

Rushikulya and Sangam are one of the newest, while other halls have seen the weary of time. Hope you enjoy your first year stay! Don't worry, girls will be promoted to Ganga for the next three years, while boys will have to shift to older hostels, namely Mahanadi and Brahmaputra 😉.

RHR and Sangam will be the places you'll meet your college friends with whom you'll make memories worth recounting in the future and trust us, everyone on campus wants to go back to those days of our freshers' hostel.

# SCHOOLS

## SCHOOL OF ELECTRICAL AND COMPUTER SCIENCES

Students enrolled in B.Tech for Computer Science Engineering (CSE) , Electronics and Communication Engineering (ECE) and Electrical Engineering (EE), this is going to be your collective shrine for your undergrad years. Being the nearest school to hostels, students are often seen going to classes or labs at their leisure either by walk or cycle.The school hosts **multiple centers and cool labs for the students including labs for VLSI, semi-conductor manufacturing, etc.** Feel free to drop by or ask seniors/Mtech TAs for a trip to these hubs!

## SCHOOL OF BASIC SCIENCES

The first year courses of Mathematics, Chemistry, Physics will be taken by the esteemed profs of this school. This is also the main school for students enrolled in ITEP (B.Sc-B.Ed) in Physics, Chemistry and Mathematics. Though labs are situated in a separate Lab Complex, it is right behind SBS with the vicinity of Nescafe and Raju canteen satiating students' hunger. The students enrolled in B.Tech in Engineering Physics and Mathematics and Computing, this is your home school. **We wish you the best of luck!**

## SCHOOL OF MECHANICAL SCIENCES

Students enrolled in B.Tech Mechanical Engineering, rightly called Royal Mech, enjoy having the highest population amongst the batch. Being one of the farthest schools from the hostel, students here are prone to skip lunch while balancing their courses and long scheduled labs. **Do invest the time in knowing about the recent advances in your labs!** We advise you to maintain health and **stand your ground juggling lab reports and assignments with concepts to have** balanced academic prospects :)

# SCHOOLS

## SCHOOL OF INFRASTRUCTURE

Students enrolled in B.Tech Civil Engineering, along with their Mech batchmates face the distance constraint from hostels. You could enjoy the student-led environment of the school though! They **enjoy the benefit of having almost** a student friendly schedule.
Freshies you will be visiting this school for the later half of your EDG couirse.
The school has gone through a lot of development recently. Explore whenever you are free! :)

## SCHOOL OF EARTH, OCEAN AND CLIMATE SCIENCES

The school responsible for much required meteorological studies for such unpredictable weather like our campus, students enrolled in Masters and PhD make up the majority of students of this school. A compulsory course of ESTM is offered by this school in your 1st year. However, you can take up projects, or even raw discussions with the faculty and students of this school!

## SCHOOL OF MINERALS, METALLURGICAL AND MATERIALS ENGINEERING

Students enrolled in B.Tech in Metallurgical and Materials Engineering, this is your abode for your coming years. Situated near to the RHL, this school students enjoy the benefit of least distance between classes and labs. Although hosted in a very new building, **the faculty of this school goes a long way back in academia giving you the** best advice for your career and giving amazing BTPs :) Presently pursuing multiple projects in batteries, and emerging materials, the seniors are always up for a chat.

## SCHOOL OF HUMANITIES, SOCIAL SCIENCES AND MANAGEMENT

The much beloved subjects **offered under breadth are taught by** profs of this school, with their domain ranging from economics, business to ethics and philosophy. This school also offers B.Sc-B.Ed in Economics. Every Undergrad student needs to take at least four of these courses, **hence choose them wisely to explore the field(s).** Do not shy away from taking **interdisciplinary projects** combining your core branch which can give birth to interest in the public policy or science consultancy fields.

# OTHER ACADEMIC BLOCKS

**LABORATORY COMPLEX (LBC)**

It is home to all first-year labs except Introduction to Manufacturing Processes. **Gone are the days of lectures in LBC.**

**LECTURE HALL COMPLEX (LHC)**

There are three learning halls - Lalitgiri Hall of Learning (LHL), Udayagiri Hall of Learning (UHL), Ratnagiri Hall of Learning (RHL). Usually most of first year courses are conducted in UHL and most courses from SHSSM are conducted in LHL.

**LIBRARY AND READING ROOM**

The fourth and fifth floors of the main building are dedicated to the library and reading room, respectively. The timings for the library are from **8:30 AM to 12 AM on weekdays and 9:00 AM to 9:00 PM on weekends**, while book circulation ends at 8:30 PM. The reading rooms are open from **8:30 AM to 2:30 AM** but are subject to change (upto 24/7) during the exam season (any other time, you'll find us watching movies with our feet up).

**SECS LIBRARY**

SECS boasts a mini library that we bet a lot of your seniors are unaware of!

**DESIGN AND INNOVATION CENTRE (DIC)**

DIC, on the third floor of SMS, funds your projects by procuring your materials for you and providing you access to various tools to work with. Be ready with your **thinking caps, an idea, and a proposal**, the rest of the steps will be guided by the seniors you will find sleeping there (and the staff)!

# EATERIES & SHOPPING COMPLEX

For the universal departmental store experience, where you get everything from party supplies to daily commodities, you have to go no further than Radhika Store at the New Shopping Complex.

Do let us know your experience!

That being said, don't underestimate the store in the Old Shopping Complex where the shopkeeper can fish out almost anything from the back, you name it.
Calling the stationary store in the Old Shopping Complex a mere stationery store would be an understatement as it is the go-to place for art supplies, chargers, earphones, some sports equipment, umbrellas, caps etc. If they happen to be short on supply, just inform the bhaiya and it will be available in a matter of days.

For all things medical and some soothing aloe-infused moisturiser/ medicinal soaps, shampoos and related things, visit the Apollo medical store at Sanjeevan Health Centre.

Sanjeevan Health Centre

# EATERIES & SHOPPING COMPLEX

For a cold and breezy day or a hot and scorching one, a stroll for fresh air or an escape from busy schedules, you'll always find yourself stopping by Amul at BHR or Omfed Parlour at Old Shopping Complex for a scoop of ice cream or a calming drink to top off your day. We suggest the mango lassi and the cookies and cream ice cream. For those of you feeling a little too health-conscious, a refreshing grape juice or a bowl of fruit from the fruit stall at Old Shopping Complex after a tiring workout session at the gym or a high-tension game of basketball. Future Gymheads, this store is going to be your supply for bananas! You can also get a bag of fruits to chomp down for a later day when the mess food seems slightly more inedible than earlier. Beware of the hygiene of mixers, if you find them not being frequently rinsed, just tell them before your order is being made. Do visit Mother's Touch for a taste of homemade food, all cooked by the family members of our own faculty.

If you happen to have a serious case of the munchies, you have to find your way to Rolling Crunchies at SAC. Don't get disappointed by the size of it, even the master chef in Ratatouille is, after all, a small rat. We're not suggesting that there are rats here at RC or that they are 5 stars but it's relatively good. They have everything from pizzas and burgers to rolls and fried-rice.
Thinking of giving yourself a treat? Stop by Domino's for a change in your palette. The most cost-effective and fulfilling option is the Lunch meal, giving you a five course meal at a relatively lower price.

# EATERIES & SHOPPING COMPLEX

Now, if you have extra-special cravings for that unifying experience of every Indian everywhere, especially during the monsoons a.k.a. Bajjis and Pakodas, Jai Shree Ram is where we'll expect to find you. They also happen to sell carbonated drinks, ice-creams and other packaged food.

For all you sophisticated coffee-drinkers and maggie-lovers, Nescafe is the place to unload your day's stress. Do check out their menu for their range of coffees, maggi(s) and sandwiches. You'll find a kiosk-version of it behind the Laboratory Complex (LBC).

Don't forget to check out the Kanhaz Restaurant in the New Shopping Complex, our only restaurant on campus (yet)! It has the cheapest Chole Bhature and is always the place for low-budget treats. Their menu also includes a variety of snacks and breakfast items- the best place to regroup after society-related activities.

Rolling Crunchy's

# EATERIES & SHOPPING COMPLEX

We understand that when you get your brain juices flowing, you might need a snack or a whole meal. Raju's Canteen, next to LBC, will be your study-buddy on those days when you have too many lab reports to write or assignments to submit and can't bring yourself to cycle back to your hostel for lunch. You can also try out the canteen behind SECS, Shuchi for their milk cakes, sandwiches, momos and a quaint setting. Check out the new SIF canteen and give us your reviews!

If you're a night-owl and like a celebratory-snack after a productive study session, the night canteens are the light in the darkness if you manage to make your way down from your hostel rooms. There's one night-canteen in every hostel barring SHR (sorry guys, we don't make the rules), each having its own special dish(es). Open from 6 PM, night canteens are a great place to socialize and even have polite interactions with cool seniors (like us!). Do try out the chai and pakoras at the RHR canteen and the aloo/paneer parathas at BHR canteen along with their rolls. A special shout out to the biryani and other side dishes at MHR. Don't forget to check out all their menus to find your personal favourites.

If you have a sweet tooth you can try out the newly opened bakery, Mio Amore infront of LHL. But make sure you check the expiry dates before you purchase anything

***DISCLAIMER*: Flavours are bound to change and Oracle is not responsible for your experience.**

# CHOICE OF EAA

You are required to choose one of the following EAA activities alongside a compulsory Yoga course. Don't think Yoga is boring, it can be fun, at least you'll need to learn a few poses and names to pass the exam!

## NCC - National Cadet Corps

Few of us already have an idea about NCC, since our schooldays, with cadets having camps in holidays, regular march past practice and training. It's similar here also, with cadets having weekly practice and march past for National events like Independence and Republic Day celebrations in our Institute. Your practice sessions are at the discretion of Sunita ma'am

## NSO - National Sports Organisation

All the sports enthusiasts, see away no more. With a wide variety of sports like Football and Cricket (only for boys), basketball, volleyball, tennis, badminton, table tennis and athletics this is your chance to start learning your interested sport or improve your skill set. For pre-existing sport backgrounders, this can be your gateway to Inter IIT Team selection process, hence be wise while choosing your sport choices. But again beware of practice sessions, thrice a week starting from 6:30 PM to 7:30 PM.

## NSS - National Service Scheme

Not a sports head or interested cadet? Then NSS is for you. With activities like E-Waste collection to plantation drives and each week is a new challenge to explore. Class held once a week, lets you all do activities in and out of campus helping develop your volunteer nature and you can explore creative ways to tackle existing problems! Community service in the best way possible.
Some easy (but not effortless) grades right here!

FRESHER'S GUIDE

# TACKLING FIRST YEAR!

The **ITEP curriculum** is unique and never monotonous. In your respective major subjects, most syllabus will be familiar from high school and can be easily tackled. However the real appeal of the course is the basket of Humanities and Teaching Aptitude subjects designed to nurture a new generation of educators. The curriculum is devoted to deep understanding of your majors but is also focused on your overall intellectual development and the inception of an improved thought process. Take them in stride and appreciate the impact they will have on you as well.

**A Glance at common subjects for first year:**

## FIRST SEMESTER

- Art & Creative Expressions (ACE) - Unique and scoring curriculum to make us feel that art can be a vehicle to improve understanding of concepts with a deep focus on developing critical thinking abilities.
- Sanskrit (L1S) - Little challenging in the beginning for one without a Sanskrit background. Lifts us from fundamental level & cultivates our connections to our ancestors, making us capable of appreciating famous Sanskrit literature as well.
- Evolution of Indian Education(EIE) - A historical recap of the developments that have led to the current education system for the benefit of the students who will be working in the field soon.
- Understanding India I (UI) - This part gives us a close look on Ancient India & corrects wrong conceptions. Interpretations instead of rote learning are encouraged.

## SECOND SEMESTER

- English for Communication (EC) - Scoring and has elements we are used to. But it's true aim lies in fostering clarity of thought and effective communication skills.
- Teacher & Society (TS) - Highly scoring and practically important. Explores an educator's place in the web of society. Also probes into areas like Gender Identity, Technology, Inclusiveness within the context of education.
- Understanding India II (UI) - The final part of the course deals with intellectual traditions of India- Philosophy and our contributions to Linguistics, Astronomy and Mathematics. Feels dense and complex for some but a unique and interesting course infusing us with a sense of identity and pride of our heritage.

***Pro tip: As long as you don't breakburn anything in the labs, you should be fine. (provided you manage to get a few words out during VIVAs)***

FRESHER'S GUIDE

# TIPS AND TRICKS TO SURVIVE THE FIRST YEAR!

- Missing a lab class is hazardous to your CGPA!
- Start practising for BEEE and EM from week 2 at least. Solve given assignments and go through books used by prof for a safe grade.
- Juggling extracurriculars with studies is key to success in college life!
- Once CGPA goes for a toss, it becomes psychologically challenging to improve it due to diminished self-confidence, increased stress, and the compounding effect of earlier poor performance. Hence better to start taking grades seriously in the first semester.

- There is no branch change option, hence don't stress for dassi and nine pointers!
- Consistent Grade above 7.5/8 is more than enough for having fulfilled your expectations of academic life in an IIT!
- Try to think out of the box, you have cleared JEE, hence days of just studying for marks are over. There are a million opportunities out there, waiting for you to turn a stone!

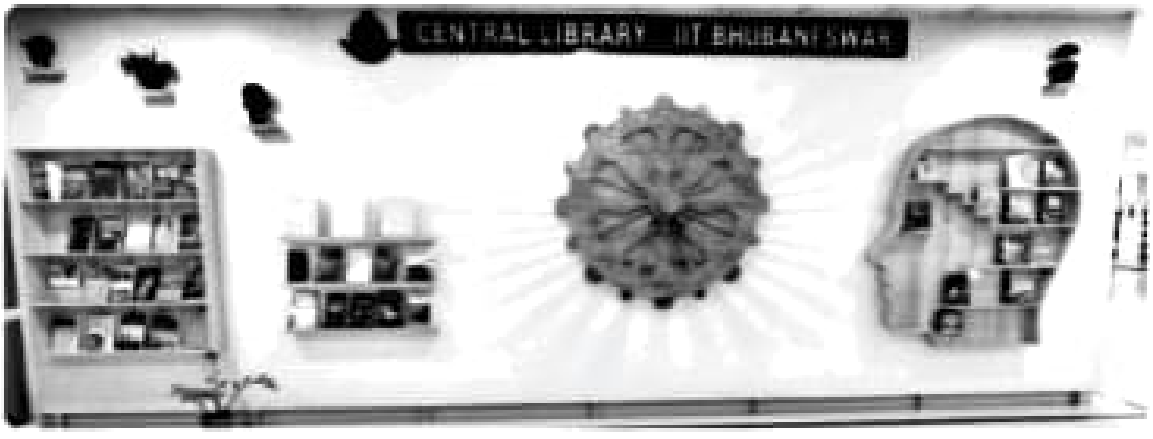

***Caution:** Try to stay away from any letter after C, you never know in conquest of Ex, you may end up on the cliff of Pf*

# TACKLING FIRST YEAR!

There will also be some branch specific courses for certain branches. Here is an overview of them. They will probably be in the second semester

## BRANCH SPECIFIC COURSES

- ECE - FSD (Fundamentals of Semiconductor devices) : Given its deep foundation in physics and minimal math, this course can get pretty challenging if you skip lectures or neglect regular revision. On the plus side, your exams will feel a lot more manageable if you just stay focused during class and stay on top of your coursework.
- EE - ADEC : This course covers analog electronics before the mid semester and digital electronics after it. While the concepts are fairly easy, the sheer number of them makes this a subject that requires regular revision and consistent practice. Stay attentive in lectures and keep up with the coursework, and you'll find both the exams and assignments much more manageable
- MnC - DM (Discrete Maths) : This course requires a lot of understanding. You need to keep revising the concepts and concepts can only be revised by practicing questions. Exams will be easy if you pay attention during lecture classes and go through the notes and assignments
- EP - CMSR (Classical Mechanics and Special Relativity) : This course needs basic information on classical mechanics from JEE, it will confuse you if you just memorize formulas. Understand Derivation, these concepts will be used in many branches of physics and it is important to not forget them. Solving questions from assignments, books and other sources will help you conceptually.
- CSE - DS (Discrete Structures) : This course leans heavily on logical reasoning and abstract math rather than memorization, so it can get overwhelming fast if you fall behind on problem sets or skip working through by yourself. The upside is that exams become much more manageable if you practice example problems consistently and actually understand the logic instead of just skimming through definitions.

# DAILY ROUTINE

## FOR EARLY BIRDS

Sorry to inform you, but you're going to be amongst a rarer group of early risers. You'll see throughout college life, this group of students **dwindles** due to acads or extras or just for the love of morning sleep. But fret not, as we're here for you, giving an almost ideal schedule that'll work out for y'all.

**Likely wake up time:** [redacted]

**Get ready and report in mess by** [redacted]

**Cycle all the way to LHC**

**Get to class by** [redacted] **( First years classes likely begin by 8:30 AM daily)**

**Attend classes till** [redacted] **and head to hostel for lunch**

**Report back to LHC or Lab till** [redacted]

**NSO students get back to ground by** [redacted]

**Start of society activities b&a dinner or both (solely depends on your interest)**

**Roam around campus and get back to hostel by** [redacted]

**Sleep and** repeat

# STUDENT BODIES

## CAREER DEVELOPMENT CELL

The Career Development Cell, functioning under the Training and Placements Officer, is formed by an army of Student Internship Coordinators and Student Placement Coordinators from every branch who collectively strive towards inviting more recruiters to the internship and placement drive and easen your recruitment process.

## COUNSELLING SERVICES TEAM

The first student body to interact with you all (freshers). The team consists of a PIC (Faculty) along with a Professional Counsellor, and the Student team includes two elected Coordinators along with a nominated team of Assistant Coordinators and Student Guides. Their primary tasks include helping you all for a smooth transition from JEE prep mindset to IIT Campus life. Other tasks include helping campus junta during stressful times through mindful interactions and stress busting seminars.

## ALUMNI CELL

Managed by the Dean and General Secretary, it works towards building the relations between the alumni and their alma mater. It occasionally organises Alumni Meets and other events.

# DAILY ROUTINE

Students of NSS will have their *classes on weekends*. Also your weekends might be occupied by yoga, various student activities, seminars or simple roaming around, in and around campus.

*We know the study time is missing in the schedule, that solely depends on you and your assignment deadlines*

**Schedule during assignment submissions**

Assignment Submission deadline: [redacted]

Students solving assignment till [redacted]

# COURSE AND GRADING SYSTEM

Course structure is in the form of L-T-P which is visible always for any course in your curriculum. L - Lecture, T - Tutorial and P - Practical. You will have 1,2,3,4 credit courses for first year where L-T-P will be decided by the Prof. Similarly all of your labs are practical courses.

Grading system is totally up to your Profs and your peers. They have the choice of either relative grading, or absolute. Relative grading is done with respect to highest marks scored in class by students, whereas absolute is done with respect to total marks for the paper.

Your peers matter the most in case of relative grading, and if you have Chatur level toppers, the grading difference wouldn't matter because they would score full on leaving no safe zone in relative grading.

Most of the Profs give 20% *for **assignments***, 30% ***for Mid Semesters***, and 50% *for **End Semesters***. But better watch out for some surprise projects or green attendance schemes.

There is a new attendance policy in our college. You will not be deregistered from your course but your attendance will directly affect your grades now. There is a linear scale from -5 to +5 marks for attendance. 0% is -5 and 100% is +5

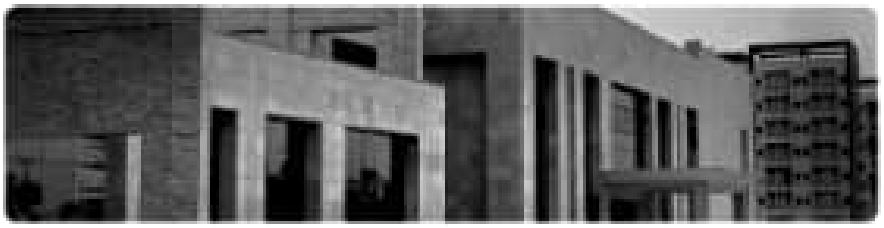

Grading Criteria
(not mandated but advised)

| | |
|---|---|
| 90-100 | Ex |
| 80-90 | A |
| 70-80 | B |
| 60-70 | C |
| 50-60 | D |
| 35-50 | P |
| <35 | F |

# STUDENT BODIES

## STUDENTS' GYMKHANA

As a participant of campus culture, you'll be introduced to one of the most prominent and influential student bodies of IITBBS- the Students' Gymkhana. It includes the Socio-Cultural Council, the Science and Technology Council and the Sports Council each headed by their respective Faculty Advisors and General Secretaries along with their team of Secretaries for each society. It is headed by the President (Faculty) and the Vice-President (from the students' end).The UG, PG and Ph.D representatives are also a part of Students' Gymkhana. You will be more formally introduced to them via society introductions and inductions (more on that by the respective stakeholders).

## HOSTEL COUNCIL

The Hostel Council, headed by the General Secretary in every hostel, is responsible for addressing student issues and taking up said issues with the hostel staff or Warden Council in the Council meetings. Every issue regarding mess/ maintenance can be filed with the hostel council. For anything broken or to be repaired in your room or in the common area, a complaint must be filed at the Hall Office. If it isn't addressed in a reasonable amount of time, take it up with the GSec.

***Members of both above-mentioned student bodies are** elected.*

# DAILY ROUTINE

## FOR NOCTURNAL OWLS

Most of the peers in your batch will come under this category sooner or later in their college life. We'll try to give you the most possible schedule here.

**Wake up at [redacted] and run to mess.**

**Take bread toast or banana and cycle along the way to LHC**

**Enter the class by [redacted] max and get attendance done with.**

**Be free to doze at your own risk (profs have spidey senses)**

**Go to lunch and complete lab records by [redacted]**

**Cycle back to LBC/LHC and proceed with classes.**

**NSO students get back to ground by [redacted]**

**Start of society activities before or after dinner or both (solely depends on your interest)**

**Roam around campus and get back to hostel night canteen by [redacted] (can extend according to your interest)**

**Corridor talks and group discussions till [redacted]**

**Sleep and** repeat

# TRANSPORT
## IN AND OUT OF CAMPUS

Using public transport like Ama Bus or our institute vehicles is pocket-friendly making them a more reliable option; their schedules will be emailed to you and attached here also. Don't depend on auto-rickshaws unless it's an emergency! (Rickshaw uncles, don't fight with us in the comments!)

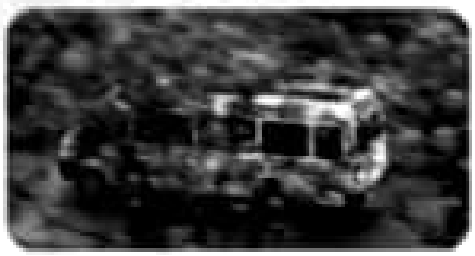

### ROUTE NO 38

FRESHER'S GUIDE

# TACKLING FIRST YEAR!

First year is mostly common for all students irrespective of their branch of engineering. Hence, think of it as an extension of your class 12 with introduction to physical experiments. Mathematics I (Calculus and Ordinary Differential Equations) and Mathematics II (Linear Algebra and Complex Analysis) are compulsory math courses for semester 1 and 2 respectively, taken by our SBS profs.
Certain mandatory courses are required for all branches, though the semester in which they are taken may vary. Lets take a look at how you can tackle your very first year.

## COMPULSORY COURSES

- ELC (English Language for Communication) : It's a course that almost everyone slacks off on, and you probably will too. However, don't mess around with the exams—follow the Prof's guidelines exactly, or you could end up in hot water.
- HLS (Happiness and Life Skill) : A one credit course totally dependent on attendance (do not miss out on this because it is easy scoring)
- BEEE (Basic of electronics and electrical engineering) : Just an extension to the electricity part of Class 12th and the basics of electronics is fun too. If you have a strong foundation you can rock this course.
- ESTM (Environmental Science Technology and Management) : Yeah environmental science, perform well in the exams and you will get your grades.
- IBT (Introduction to Bioscience and Technology) : The one thing we all fear - BIOLOGY, yes you'll be studying biology even after taking MPC! All the best for that.
- Programming in C : Introduction to the basics of programming, those who already have a bit of experience will absolutely rock it, while anyone who has never coded before might face some difficulties (remember, practice is the key!).
- IBKT (Introduction to Bharatiya Knowledge Traditions) : A blend of history and science of our rich culture. This course can be either very interesting or very boring (depending upon how you see history). Although the Prof really makes up to the boring part.

***Pro tip:** As long as you don't break/burn anything in the labs, you should be fine. (provided you manage to get a few words out during VIVAs)*

# TRANSPORT
## IN AND OUT OF CAMPUS

Bus service is available for most of the classes and labs which are generally crowded. The bus schedule is updated via mail but cycles are the best if you want to go at your own pace to the classroom/lab.

E-rickshaws are also available to go anywhere inside the campus, just give a ring to any of the below numbers and ask uncle to come to your location (but we are not sure if they will lift the call).
+91 76839 95772
+91 89173 27084
From Learning halls to Hostels its 10/- per person and from SMS/SIF/LBC its 15/-

You also have an alternative of renting an electric vehicle for exploring outside the campus (you must have driving license). You can rent the vehicle from their app DriEV and can collect the EV near main gate.
They are usually open everyday from 10:00 AM to 7:00 PM (closing hours are quite strict - he won't give you a bike even half an hour before 7:00 PM).

FRESHER'S GUIDE

# TACKLING FIRST YEAR!

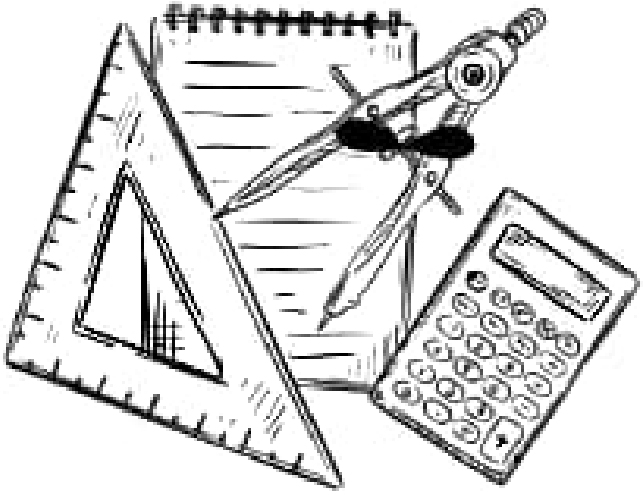

**A look at the first year courses for different streams of ITEP:**

## FOR ECONOMICS MAJOR

- Macroeconomics I - This course begins with the principles of economics and goes towards introduction to schools of Economics. Scoring subject.
- Macroeconomics II - Extremely challenging course. First introduction to Economics models. Questions will be application based, so complete understanding is required
- Microeconomics I - Extremely lengthy syllabus. This subject builds the foundation for all 4 years. The question paper will be mostly application based.
- Microeconomics II - This course is entirely filled with derivation of all topics taught in Microeconomics 1. Extremely easy if micro 1 is done properly. Purely based on the prof.
- Mathematics for Economics (ME) - Most scoring subject in entire first year. Just basic understanding of calculus and linear algebra is required. Some applications of economic models will be taught.

## FOR MATH MAJOR

- Calculus and Analytical Geometry (CAG) - Introduces advanced concepts in calculus and analytical geometry.
- Linear Algebra (LA) - A conceptual and scoring course. Missing the basics early can make later topics challenging.
- Real Analysis (RA) - Introduces rigorous proofs and abstract reasoning. A concept-driven course that can be challenging.
- Probability and Statistics (PS) - A scoring course that requires sustained effort and regular practice.

FRESHER'S GUIDE

# TACKLING FIRST YEAR!

**A look at the first year courses for different streams of ITEP:**

## FOR CHEMISTRY MAJOR

- Basic Organic Chemistry (BOC) - This course will go with the fundamentals of organic chemistry, what you learnt in your 11th and 12th. It might be fun but the class will be a 'no smartphone' zone
- Organic Chemistry Laboratory I & Physical Chemistry Laboratory I - The labs are the fun part,be it crushing tomatoes or adding indicators . If you follow sincerity, grades will follow you. Enjoy the expenence.
- Organic Reactions & Mechanisms (ORM) - It will get a bit tough with reactions and mechanisms but regular practice is the only key to your good grades.
- Introduction to Physical Chemistry (IPC) - Those long derivations and the formulas will get more interesting if you understand it rather than mugging it up . Once you know the concept, solving numericals will be a piece of cake !

## FOR PHYSICS MAJOR

- Mechanical waves and oscillations (MWO) - The course begins with basic concepts covered in high school while progressively becoming difficult as the course moves on.
- Physics Lab I - Pretty basic and easily scoreable course which involves very basic experiments. Overall, this is a very engaging and interactive course.
- Mathematical Physics I (MP I) - Very important and conceptual course which will form the baseline or the backbone for all the upcoming courses in the future. With thorough practice and attentiveness in classes, this subject becomes an easy score.
- Electricity and Magnetism(EM) - This course also gradually toughens as the course progresses, although constant practice is required for getting a good score.
- Basic Electronics and Lab (BE) - As the name suggests this course offers a basic understanding of Electronics. Easy to understand and easier to score.
